

Waterloo Acoustics Ltd

In the heart of London and the historic Grays Inn, home to the 'Inns of Court', lies the 111,000sqft modern multi-storey offices of Telereal Trillium. Extensively refurbished by Mitie Interiors, the new HVAC plant includes four large roof mounted chillers.

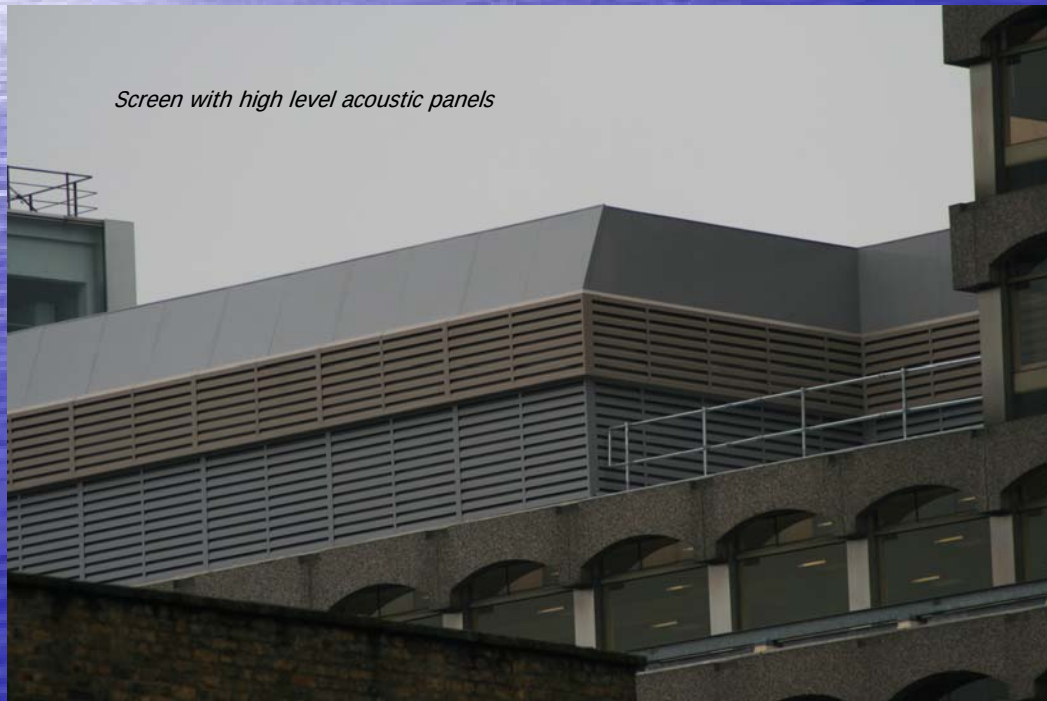

The challenge was to design an aesthetically pleasing acoustic screen that would accommodate the functionality requirements of modern plant. Screen design carried out by our expert team of acoustical engineers in compliance with the stringent local authority noise criteria ensured no impact upon nearby properties.

Waterloo Acoustics were selected to supply and install the structural steelwork supports for the screen with also incorporated high level acoustic panels. The architectural aesthetics demanded visual alignment with existing building features incorporating unique contours and a two-tone colour finish. Speaking in praise of Waterloo Acoustics, Steve Jones (Project manager for Mitie Interiors commented that "Waterloo Acoustics worked in an efficient organised manor within tight programme constraints".
