WL60C/TB –Triple Bank Louvres

Waterloo Acoustics have successfully completed the installation of high performance triple banked weather louvres at a data centre in Welwyn Garden City.

The louvre screens was designed against stringent airflow and weathering requirements to ensure ventilation with minimal rain penetration to the sensitive switchgear in the data halls. The installation included the supply of substantial secondary steelwork supports for the louvres which amounted to a total louvred area in excess of 750 square meters provided as 6 separate screens each measuring 25m long by 5m high.
